Table of contents

1. Introduction 1

1.1. Situating the need for conversion 2

1.2. The problem 2

1.3. Assignment 3

1.4. Objectives 3

1.5. Organisation of the report 3

2. Digital audio and audio compression 5

2.1. Why digital audio 6

2.2. From analog to digital 6

2.2.1. Remarks about sampling 8

2.2.2. Remarks about quantization 9

2.3. Compression 10

2.3.1. Examples 10

2.3.2. Disadvantages 12

3. MPEG 14

3.1. What is MPEG 15

3.2. MPEG features 16

3.3. MPEG verification tests 16

3.4. MPEG structure 19

3.4.1. MPEG audio 19

3.4.2. MPEG video 20

3.4.3. MPEG systems 22

3.5. MPEG history and future 23

3.5.1. MPEG-1 23

3.5.2. MPEG-2 25

a) Backwards-Compatible (BC) part 26

b) Non Backwards-Compatible (NBC) part: MPEG-2 AAC-coding 28

3.5.3. MPEG-3 29

3.5.4. MPEG-4 30
3.5.5. MPEG-7 33

4. MPEG-4 Audio (version 1) 35

4.1. Differences to previous standards 36

4.2. MPEG-4 audio capabilities 36

4.3. Technical overview 39

4.3.1. Audio object types 39
4.3.2. Audio profiles and levels 41

4.4. MPEG-4 AAC tools 41

4.4.1. AAC gain control tool 43
4.4.2. Filter bank 44
4.4.3. Temporal Noise Shaping (TNS) 47
4.4.4. Long Term Prediction (LTP) 48
4.4.5. Intensity / coupling 49
4.4.6. Backward adaptive frequency predictor 50
4.4.7. PNS 51
4.4.8. The M / S (Middle / Side) stereo coding tool 52
4.4.9. Scalefactor coding, quantization and noiseless coding 53
a) Scalefactor coding 53
b) Quantization 54
c) Noiseless coding 58
4.4.10. Bitstream formatter 59
4.4.11. Psychoacoustic model 60

5. Testbenches and testing 64

5.1. Big testbench 65

5.1.1. Description of comparison method 65
5.1.2. Description of construction 67
a) Description of encoder- and decoder-automation 67
b) General remarks for producing files 70
c) Using the big testbench 71
5.1.3. Software implementation 72
a) Reading of files and calling the encoders and decoder 72
b) Creating files for comparison 72
5.1.4. Block diagram of testbench 74

5.2. Testbench for the tool itself 76
5.2.1. Description of the comparison method 76
5.2.2. Description and use of testbench 77
5.2.3. Software implementation 77
a) Creating files for comparison 78
b) Description of comparison-code 80
5.2.4. Block diagram of testbench 80
5.3. Automated simple test program 81
5.4. Testing with music files 82
5.5. Conclusion 82
6. Conversion from floating-point to fixed-point arithmetic 84
6.1. Purpose of the alterations 85
6.2. Used strategy for the alterations 85
6.2.1. Processor on which the code should be used 85
6.2.2. In fact the alterations are simulated 85
6.2.3. Which steps have been done 86
6.3. Train of thought for implementation 86
6.3.1. Representation of and conversion to new variables 86
6.3.2. Explanation of the header file used for the simulation 88
6.3.3. Editing calculations 90
a) Additions and subtractions 90
b) Multiplication and division 91
c) Other calculations 91
6.4. Application on the tool itself 92
6.4.1. General 93
6.4.2. Name and presentation of variables 93
6.4.3. Conversion into RATIONALTYPE 93
6.4.4. Editing calculations 96
a) Method: rescale_to and rescale 97
b) Using the values of a file for a part of the calculation 97
c) Using the values from a file for interpolation 98
6.5. Obtained results and next steps 99
7. Conclusions 101

8. Literature list _____ **104**

9. List of figures _____ **108**

10. List of tables _____ **110**

11. Appendixes _____ **bijlage**

11.1. Appendix A: code of big testbench _____

11.2. Appendix B: code of testbench 2 _____

11.3. Appendix C: code from the tool that has been adapted _____
